

A tall, stainless steel patio heater with a large, adjustable head and a protective screen. The burner is glowing red, indicating it is on. It stands on a base with a storage compartment. The background shows a balcony railing and lush green foliage.

REVOLUTIONARY DESIGN EXTENDS AL FRESCO LIVING

A welcome change to outdoor heating

If you are looking for a safe, reliable robust and cleanburning patio heater to replace the rusted out, dented, hard to light old thing you might currently own, then look no further than Heatmax NZ's newest design in radiant outdoor heating.

Constructed of 304 and 316 high grade stainless steel, the cutting edge design, low gas consumption and clean burning nature of the Heatmax HM450 radiant gas heater, makes it the heater of choice for discerning home owners who have spotted it in use in cafes and restaurants across the nation.

Honed to perfection by the grueling demands of the hospitality industry who require that their heaters are easy to light, easy to move, and will operate for many hours unattended, the Heatmax HM450 has piezzo ignition, no pilot light and really goes the distance, with 40 hours of burn time from a 9kg gas bottle.

When approving this heater for use outdoors and under cover, plus indoor commercial use, the Australian Gas Association test laboratory commented on the high output and low input of the HM450. With its efficient gas usage (1/4 that of conventional patio heaters) and an emission level of almost zero, it is a responsible eco friendly choice, conserving both money and fuel and making a minimal environmental impact.

Being a directional radiant heater, all the heat can be directed to where it is required without heating empty spaces and dead areas. It is a great solution for heating on decks.

It is easy to move and the flame will extinguish if it is accidentally knocked over.

The arm and head can be disconnected for easy storage when not in use.

Revolutionary in design, the Heatmax HM450 is not the cheapest outdoor heater on the market.

It is undisputedly the best.
